I pledge allegiance to my health, to not compare myself to anyone else. With fruits and vegetables I’ll fill my tray and get nice and sweaty every day. I have only this body and this one heart so today’s the day I’m going to start eating less chips and less sugary drinks and before I eat I’m going to think!

I Pledge Allegiance to My Health
This pledge can be read daily at school or at home with your family to remind you of all the ways to take care of your body!

A ½ cup of pumpkin is an excellent source of vitamin A.

For many centuries, people have carved “jack-o-lanterns” at Halloween. In Ireland and Scotland, they originally used potatoes and turnips. In England, they used beets. In the 18th and 19th centuries, American colonists found pumpkins to be the most ideal “vegetable” for carving jack-o-lanterns.

- Pumpkins are 90% water. Pumpkins can range in size from less than a pound to over 1,000 pounds.
- Winter squash include: butternut, hubbard, pumpkin, spaghetti, and acorn.

- Investigation: Are pumpkins fruits or vegetables?
- Read the book Fruit is a Suitcase for Seeds!

Botanically, scientists classify pumpkins as fruit because they have seeds. In the 1893 U.S. Supreme Court case of “Nix v. Hedden,” the pumpkin was declared a vegetable, along with cucumbers, tomatoes, beans, and peas. This came about because of a tariff law in 1887, which added a tax on vegetables but not fruits.

Pretend you are a scientist and you need to conduct experiments only on fruits. Using what you learned above, and the list provided on the next page, make a list of all the “vegetables” that should really be classified in the fruit group. Write an explanation using evidence from the reading to support your answer.

- Spaghetti Squash
- Butternut Squash
- Acorn Squash
